Work History

Software Engineer

2020 – Current Inflection Point Systems.

I joined this company as a Software Engineer and I hace participated in many projects. I have to make backend, frontend, and Mobiles APP, and I have to make secure connections. I have learned to make testing with React Testing Library. I have participated in projects since their inception, we raise customer requirements and solve their problems, we use SCRUM methodology to carry out our projects and we rely heavily on Jira Software. The technologies or frameworks I currently use are: **Javascript, CSS, HTML, Typescript, ReactJs, React Native, Redux, Formik, Bootstrap, Material UI, Angular, Sockets io, NodeJs with Express, Mongo DB, NPM, GIT, Jira Software.**

FrontEnd Developer

From 2018 to 2020 – Ticsa Comunicaciones, Monterrey Nuevo León.

I worked as a Javascript Developer in charge of FrontEnd. I made connections with the backend, and I made sure that the web page is visually pleasing for the user. We made real-time connections with Sockets.io to show the status and lifetime of a sensor. We also had projects with traffic lights on the road, where we could move the configuration and flow of vehicular avenues through a web page, and we design and implement friendly web pages with customer-friendly designs. I participated in projects since their inception, we rose customer requirements and solved their problems. The technologies I used were: **Javascript, ReactJs, React Native, Redux, Formik, Bootstrap, Material UI, Angular, Sockets io, NodeJs with Express, Mongo DB, NPM, GIT, Jira Software.**
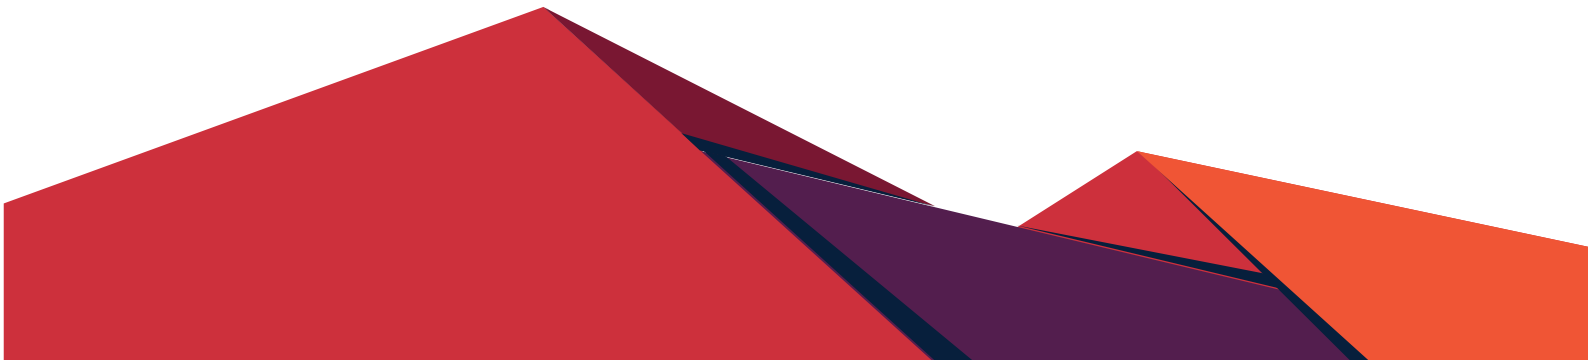

Web Developer

From 2017 to 2018 – Taco Gurú, Monterrey Nuevo León.

I worked as a web developer in a startup called Taco Guru. I believe that my knowledge as a developer grew in this company because Monterrey is a very competitive city. This is when I got to know the ReactJs framework. I started developing asynchronous web pages and I was very excited to be able to request without the web page having to refresh. I liked it so much that I studied for a diploma in ReactJs and React Native. Taco Guru had different clients, they were focused on taquerías, and their line of business was to look for a taqueria near you. Here I developed different websites for different restaurants, and I began to work as FullStack. The technologies I used were: **HTML5, CSS3, Javascript, JQuery, PHP, MySql, NodeJs with Express, Mongo DB, ReactJs, React Native, Redux, Formik, Bootstrap, Material UI, NPM, GIT, Jira Software.**

Web Developer

From 2015 to 2017 – Tres Vidas Acapulco Club de Golf, Acapulco, Guerrero.

In this job I started my journey as a web developer. I developed a vehicle entry system, with which the guards reviewed each vehicle using a tablet at the entrance of the hotel. With this system, they could review the vehicle's data when entering, and if it was registered as a golf club member, they would let the vehicle enter the hotel. The technologies I used for this system were: **HTML5, CSS3, and JavaScript with JQuery,** on the frontend side, while on the backend I used **PHP and SQL Server.**
